Project challenges: sustainable development and urban resilience fosters a multidisciplinary discussion on the role of the architectural project for implementing the Sustainable Development Goals of the 2030 UN Agenda. The collected contributions of researchers and important stakeholders reflect on the necessity to operate in the perspective of finding sustainable development alternatives and resilient responses to changes, offering a wide range of keys for reading and interpreting phenomena and challenges that connote the contemporaneity at different scales, from global policies to local interventions. Complex challenges in which environmental, cultural, social, and economic aspects seamlessly intertwine.

The environmental technological project becomes an element of synthesis of the needs and resources of the territories and the local communities. Since the environmental, landscape, and cultural resources are largely non-renewable, they have to be used with awareness and responsibility, going beyond the concept of protection in itself and moving in the direction of the safeguard and transformation, in close continuity with the context of reference and in line with the limits imposed by the fragility of the assets themselves.

The result is a systemic approach to the issues of sustainable development and urban resilience, realised through the implementation of innovative processes for the enhancement, integration, regeneration, and inclusion of the environmental, cultural, social, and economic heritage.

Daniele Fanzini
Architect, with a PhD in "Technical Innovation and Architectural Design", he is associate professor of Architectural Technology at the *Politecnico di Milano*, Department of Architecture, Built environment and Construction engineering. He is interested in design processes for the innovation and transformation of the built environment.

Andrea Tartaglia
Architect, with a PhD in "Technical Innovation and Architectural Design", he is associate professor of Architectural Technology at the *Politecnico di Milano*, Department of Architecture, Built environment and Construction engineering. His research activity is focused on the subject of innovation at three levels: the regulatory and procedural, the qualification of processes and products and that of environmental sustainability.

Raffaella Riva
Architect, with a PhD in "Design and Technologies for Cultural Heritage", she is assistant professor of Architectural Technology at the *Politecnico di Milano*, Department of Architecture, Built environment and Construction engineering. She conducts researches with reference to the contents of environmental design, with respect to the issues of governance, and the enhancement of the landscape and cultural heritage for local development.

The ebook version is freely downloadable from Re.Public@Polimi (the institutional repository where research publications produced by scholars and researchers at the *Politecnico di Milano* are collected and maintained), at the link: https://re.public.polimi.it/handle/11311/1041602 ,
